

REMARKS

Reconsideration of the present application, as amended, is respectfully requested.

My means of the present Amendment, the claims have been amended to delete reference designations.

In the Office Action, the Examiner objected to the drawings for lacking descriptive textual labels in FIG 6. In response, descriptive textual labels have been added to FIG 6. A replacement sheet including FIGs 5-6 is enclosed. Further, a marked-up version of the sheet including FIGs 5-6 is enclosed for convenience. Applicants respectfully request withdrawal of the drawings objection and approval of the enclosed proposed drawing correction.

In the Office Action, the Examiner objected to the Abstract. In response, the current Abstract has been deleted and substituted with the enclosed Substitute Abstract which better conforms to U.S. practice, as suggested by the Examiner. Accordingly, withdrawal of the objection to the Abstract is respectfully requested.

In the Office Action, the Examiner objected to the specification. In response, the specification has been amended in accordance with the Examiner's suggestion. Accordingly, withdrawal of the objection to the specification is respectfully requested.

In the Office Action, claims 1-14 were rejected under 35 U.S.C. §102(a) as being anticipated by U.S. Patent Application Publication No. 2002/0,064,764 A1 (Fishman). In response, the following remarks are presented. It is respectfully submitted that claims 1-14 are patentable over Fishman for at least the following reasons.

Fishman discloses a multimedia analysis system for capturing and comparing sports performance of a golf player. Fishman is completely silent and is not related to enhancing a particular part of any display information, let alone doing so if certain criteria is met. Fishman is equally silent about any detection means that detect a particular criteria, and enhancement means which, upon detection of the particular criteria, enhances part of display information, as recited in independent claims 1 and 11-13.

Paragraph [0071] of Fishman discusses video enhancement, but any enhancement enhances the entire display, not a part thereof. Further, Fishman does not disclose or suggest performing enhancement in response to detecting one of the three particular criteria recited in independent claims 1 and 11. There is simply no teaching or suggestion of any detection means in Fishman, let alone the particular detection means and the criteria, as well as

enhancement of part of the display information, as recited in independent claims 1 and 11-13.

Accordingly, it is respectfully submitted that independent claims 1 and 11-13 be allowed. In addition, as claims 2-10 and 14 depend from independent claims 1 and 11-13, applicants respectfully request that claims 2-10 and 14 also be allowed.

In view of the above, it is respectfully submitted that the present application is in condition for allowance, and a Notice of Allowance is earnestly solicited.

If any informalities remain, the Examiner is requested to telephone the undersigned in order to expedite allowance.

Please charge any fee deficiencies and credit any overpayments
to Deposit Account No. 14-1270.

Respectfully submitted,

Amendment in Reply to Office Action of August 22, 2003

SUBSTITUTE ABSTRACT

AB

A system includes a display information-generating device such as a computer, and a display apparatus such as a monitor for displaying the display information generated by the computer on a display screen. The system further includes a detector for detecting whether a part of the display information corresponding to an area on the display screen has to be enhanced. The part of the display information may be, for example, a Windows window. The detector detects whether, in the part of the display information, (i) an application is one of a group of applications indicating that non-synthetic information is displayed, in which the application is not a picture viewer; (ii) an extension of a file is one of a group of extensions indicating that non-synthetic information is displayed, or (iii) moving information is displayed. If at least one of these criteria is true, the display information in the area will be enhanced.
